

Why a GPU is Vital for Your Operations!

ANDREA MULKEY

The reason a GPU is vital will vary. For FBOs it might be to obtain more fuel sales. One FBO without a GPU called us immediately after losing a substantial fuel sale when the pilot radioed him, "I will just fly to the next airport where a GPU is available." He realized that there were many other fuel sales lost from potential customers that never even bothered to call. Advertising GPU availability is crucial for FBO fuel sales and hangar rental.

Corporate & private operators have other reasons that make a GPU vital. Obtaining a cool start is vital for keeping cost down on engine maintenance, hence saving their company money. In addition, using a GPU to run the A/C and cool the cabin when passengers arrive is vital for a professional image. This also keeps passengers happy & productive.

Many service departments require a well regulated GPU in order to certify certain work such as gear retraction. No service department wants complaints that their technicians soiled their client's expensive upholstery because of not having the plane's air conditioning running while working inside the cabin.

BatesField GPU has additional unique features that many users have found vital which include: Dual Input capability (power from hangar or engine), 120/240V outlets (for tools, vacuums, & hangar doors), and smaller fuel efficient engines. Other manufacturers use BatesField GPU as a benchmark advertising as "comparable". Don't be misled because they lack these vital features. Learn more about these features at www.gasgpu.com or call 405-258-2600.
